

VIPER SL
PROFESSIONAL SERIES UV STERILIZER

Water upgrade. Life upgrade.

The Viper Series UVs are ideal for large commercial or residential ponds, aquariums, and water features. The specially designed lamps disinfect faster and have greater cell penetration capability. The compact body design has a small footprint making it easy to handle, install and maintain. Vipers are engineered to accommodate extreme flow rates. A provided flow switch shuts the unit off if flows fall below 95 GPM.

Aqua Ultraviolet UVs will clear your water in 3 to 5 days sometimes overnight and keep it that way.

VIPER UV SIZING CHART

MODEL	MIN. FLOW RATE	FRESH WATER STERILIZER GALLONS	SALT WATER GALLONS	30,000 $\mu\text{w}/\text{cm}^2$ (EOL) GPH
Viper 400	5,700 GPH	30,000	3,600	17,500
Viper 800	5,700 GPH	60,000	7,200	35,000
Viper 1200	5,700 GPH	90,000	10,800	52,500

Custom Viper SL Professional units are built to accommodate higher volumes and flow rates. Equipped with a high intensity lamp, our Viper SL disinfects faster with greater UV penetration. Compact sizes can be easily retrofitted into an existing system.

Stainless steel or plastic Viper SL models are available in 2", 3", 4", 6", or 10"

AQUA UV LAMP

Easily inactivates micro-organisms resistant to other disinfection methods such as chlorine.
